

When I first heard that the National Association of Broadcasters was pushing their petition, 04-160, I was dumbfounded. How can that organization believe that they can dictate what XM Radio can broadcast? Local traffic and weather on my XM Satellite Radio was a great addition to the channel lineup. I no longer have to wait through commercials, music, and talk to hear what I want to know about the traffic and weather situations in the metropolitan areas I frequently visit. When deciding a route to take while traveling through Atlanta, I need to know in advance. I don't have the time to wait on the side of the road for the commercials and music to stop to hear a 10 second blurb about the situation. I pay XM Radio for their service to provide local weather and traffic information and I would like for them to continue to do so.
